# Cancer Free! Are You Sure? 4th Edition

## Synopsis

This is the “go-to” book for cancer detection tests. It is changing the way the world detects cancer. Americans are led to believe the only way to discover cancer is to wait for a tumor to grow big enough to see it with a mammogram, PSA screening, or PET scan. This is DEAD WRONG. These tests are late diagnostic. By the time a lump or bump is discovered, it has most likely been growing for 7-10 years. This book is the road map for how to detect cancer years before standard tests do. If you are in treatment, this book also tells you how to avoid being subjected to the conventional one-size-fits-all cancer treatment. You can find out what drugs and natural therapies will be effective for your specific cancer and tailor a personal program for you. We can find cancer years before standard tests would detect it. This gives us an opportunity for true, non-toxic interventions years before finding the lump or bump. Tests can also confirm if you are truly cancer free after treatment when you’ve been told your margins are clear and your PET scan is “clean.” The purchase of the 4th Edition comes with a free Resources Download – a treasure trove of valuable tools you can use to quickly find good information for contacting integrative cancer physicians, understanding how cancer develops, and finding helpful videos and websites.

## Customer Reviews

Jenny Hrbacek is a registered nurse who was diagnosed with breast cancer in April 2009. She immediately underwent a double mastectomy and chemotherapy in the belief that would eliminate the cancer. She saw other people in the chemo room undergoing treatment because their cancer

had come back a second and third time and Jenny realized surgery and chemotherapy are not a cure for cancer. She learned how to get tested for circulating tumor cells and found she was not cancer free, even though her PET scan was "clean." She learned about a number of tests that can change how cancer is diagnosed, treated, and even prevented. Her mission is to change the way the world detects cancer. Today, Jenny consults individually with other patients and is available for public speaking engagements. She is married with three children, lives in Texas, and is active in her community and charitable organizations. She has been a registered nurse since 1990. Jenny has launched a national campaign to change the way that cancer is detected. She hosts the "Cancer University" on The Vitality Network. She appears in Ty Bollinger's 2015 "The Truth about Cancer - A Global Quest" documentary series, the "Cancer Answers Global Summit," and is a featured contributor to Doug Kaufmann's TV show, "Know the Cause."

Excellent! We highly recommend this book. With Cancer the problem of "not knowing what to do or how to monitor the cancer is a major concern. Jenny's book is a tremendous help, and an answer to our prayers on "What can we do?". She even tells you what the tests are, how much these tests cost, and where to get them. We wished we bought the hard copy instead of the Kindle book. There are so many books out there on Cancer, but none like this one. Everyone who has cancer, or is worried about getting cancer should get this book. This book will save LIVES because it tells you of tests that will detect cancer long before traditional doctors will pick it up. The earlier you can detect cancer, the easier you can cure it, and this book will tell you of Many tests to not only detect and find cancers but how to monitor it safely so you can know if a particular therapy is working effectively or not.

I loved this book! It is an easy read and very helpful and informative! I just wish more people would research other options for cancer instead of the standard cut, burn, poison! This book can help caregivers, those with cancer or those who want to prevent it! Thank you, Jenny!

Whether you have had or currently have cancer, you can avoid the "watch, wait and wonder" after the remission or cancer free declaration. Jenny has armed herself (and you) with valuable information. She also details therapies that have great promise if you would like to avoid going through "cut, burn and poison" standard practice therapies.

I don't have cancer but focus on prevention because I suffer from a long term chronic illness that

has been associated with cancer. The information contained in this book is potentially life saving. I intend to get some of the testing described in this book, for myself and for my mother who has had a few skin cancers removed lately, including melanoma.

Gives me the control I am looking for in my own health care. There are avenues I can take in spite of health insurance companies. Thank you for directing me to the right places and doctors.

I have read a lot of books about cancer but this is the most important,tells about circulating cells, the cancer doctors dont tell you this and your not cured until they are gone,THIS IS WELL WRITTEN, need to know info if you have cancer.

Everything you need to know about cancer. From a nurse who had breast cancer herself. Looking back she would have done a lot of things differently. I was flipping through the tv channel and came upon Jenny being interviewed about her book. I was intrigued. I had to order it. It is an eye opening read. The whole medical field is driven by dollar signs. I appreciated the info on various tests you can order yourself with a description and cost of each test. After reading this book, YOU HAVE TO BE YOUR OWN ADVOCATE. I highly recommend this book.

Excellent reading. Full of realistic, viable alternative beneficial test and where and how to access them.
