The Grand Canyon, Monument To An Ancient Earth: Can Noah's Flood Explain The Grand Canyon?

Synopsis

-Could the Grand Canyon's rock layers have formed in a single year of Noah's flood? -Why are there no dinosaur, bird or mammal fossils in the canyon's layers? -How do we know that radiometric dating methods are reliable? -How can we tell what happened in the unobserved past? -How long did it take to carve out the canyon? -Is Young Earth Creationism really biblical? Learn the answers to these questions and more to understand how the Grand Canyon testifies to an old earth. Insights from top geologists, highlighted by stunning photographs, provide a memorable guide to these ancient wonders of creation.

Book Information

Hardcover: 240 pages

Publisher: Kregel Publications (April 27, 2016)

Language: English

ISBN-10: 0825444217

ISBN-13: 978-0825444210

Product Dimensions: 8.5 x 0.8 x 11 inches

Customer Reviews

is irenic in spirit, scientifically informed, and biblically sound. (Paul Copan Palm Beach Atlantic University 2016-02-01)A must read for anyone interested in the direct testimony of Creation itself on the history of our world. (David R. Montgomery, Author of The Rocks Don't Lie: A Geologist Investigates Noah's Flood 2016-02-01)The various authors of this book have done us all a tremendous service in their patient and clear exposition of geological thinking about the Grand Canyon (a magnificent place in it own right!). (C. John "Jack" Collins Covenant Theological Seminary 2016-02-01)richly illustrated, superbly organized, and exceptionally readable overview of the Grand Canyon. (John W. Geissman, President Emeritus Geological Society of America 2016-02-01)This important book must be carefully considered by everyone involved in the debate about the age of the earth. (Wayne Grudem Phoenix University

2016-02-01)The authors, most of whom are Christians, have systematically contrasted the claims of so-called "flood geologists" with the actual details of Grand Canyon geology. In doing so, they have utterly demolished the flood hypothesis with an avalanche of geologic evidence sufficient to fill a canyon. (Davis A. Young Calvin College 2016-02-01)The Grand Canyon is terrific. It is a comprehensive primer on geology as we know and practice it. Everyone on Earth should be aware of what this book contains as a science text, as well as a rationale for employing scientific methods to a basic understanding of anything natural. (John Warne Colorado School of Mines 2016-02-01)

Carol Hill is the author of scientific articles on the Grand Canyon published in Science, Geology, Geosphere, and other journals, as well as Christian apologetics articles for Perspectives in Science and Christian Faith. She has been featured both on NOVA and National Geographic's Naked Science. Gregg Davidson is the Chair of Geology & Geological Engineering at the University of Mississippi. He has written a number of articles and the book When Faith and Science Collide. Davidson is an active national speaker on the subject of faith and science with Solid Rock Lectures. Wayne Ranney is a former park ranger, geologic speaker and tour guide, and author of several books, including Carving Grand Canyon. Tim Helble is a hydrologist with the National Weather Service, working seasonally in the Grand Canyon.

Could the Grand Canyon's rock layers have formed in a single year of Noah's flood? -Why are there no dinosaur, bird or mammal fossils in the canyon's layers? How long did it take to carve out the canyon? Learn more about the connection of the Bible, the Great Flood, and the Grand Canyon. Top geologists, and stunning photographs, provide a guide to these ancient wonders of creation. 240 pages, gorgeous photos. Measures 8.5x0.8x11". I recommend this book to any and all Bible students.

Very informative book. Beautiful photographs and other graphics.

This is a great book. It has helped my wife and I.

Good analysis of geological evidence. However, the ignorant non-believers in science and an old earth are unlikely to read.

Just finished the book. If there is ever testimony to the legitimacy of the term "Occam's Razor" This is it. Kudos to the well organized, thorough, factual, and just plain common sense presentation of earth's natural history from the Grand canyon perspective as God intended us to see and understand. A well needed rebuttal to the YEC books on the grand canyon and global flood geology. It probably won't change many of their minds until they can realize that their biblical interpretation needs to go through a paradigm shift and that will not compromise the reliability and truth of the bible. We can only pray. Great job, and I hope many read it. By the way- not only was the content excellent, the pictures and graphics are superb. well worth the cost.

I have been waiting for my copy of "The Grand Canyon Monument to an Ancient Earth" since I heard about it nearly a year ago. It arrived May 5th, and it was worth the wait. The first thing readers will notice is that this is a beautifully illustrated book. The efforts of Tim Helble and graphic designers Bronze Black and Susan Coman are proven on nearly every page. The second thing you will notice is that this book is an excellent short introduction to geology. This is true even ignoring the special focus on countering widely believed falsehoods about the Grand Canyon. The principle authors are professional geologists, and most are evangelical Christians. Over the years they became increasingly concerned at the distortions, and outright lies that are spread by young earth, "Flood Geology." This book's title is in fact a counter to a popular creationist tract, "Grand Canyon Monument to Catastrophe" which promotes the absurd idea that Noah's Flood deposited all the sediments, and carved the Grand Canyon in a single year just 4000 years ago. The authors show that this is not merely physically impossible, but that such an idea is unsupported by the Bible. There are an estimated 40 percent of Americans today who are being fooled by outfits like Answers in Genesis, or the Institute for Creation Research. These people are the intended audience for this book. As the last sentence in "The Grand Canyon Monument to an Ancient Earth" says, "Truth always matters."

Enjoyed the informative tone of the book. Learned some geology!

When we first met the Hills, they had been members of a church that had begun accepting the YEC teaching. They were torn between the simple facts of what they knew as scientists and told that to be Bible believing Christians they must accept the opposite in their faith. In other words, they must

leave their brains out of their faith in the Bible, and their trust in the Lord Jesus Christ. As I recall, we were teaching "Genesis", and we discovered that the Bible made no such claims as were being preached by Henry Morris, etc. In the years since, we have observed the Hills "up close" and shared many times the struggles related to sharing the Gospel with men and women of science, with a "second front" being fought from the side with the YEC movement. A few years ago, Carol told us of her project of writing this book. I've read some of her technical papers concerning caves and geology, and struggled with some of the terms, but was greatly educated by her knowledge. Now, having read this masterpiece, I'm greatly impressed with the thoroughness of her work, and the work of the other authors throughout. It is very readable with easy to verify facts and illustrations. The photography is first rate, showing the beauty of the canyon while providing understanding to the evidence. Unlike what I have encountered with those of the differing views, there are no attacks and no name calling. (And I have personally attended and "endured" many hours in silence while listening to lectures from the opposite side . . . and discovered no humor when attempts were made to be at least friendly and cordial.) Many years ago, our family attended lectures at a local church given by Henry Morris expounding on his views of the flood . . . let's just say that the evidence did not then, nor now, support Morris' teaching. This book clarifies the YEC views and puts each to the test of the demonstrable facts, in word, in illustration, and photograph, without being unkind nor insulting. Recently, I purchased a second copy to loan out, not willing to lose our autographed gift copy. The first loan is to a friend that works as a researcher for the Park Service, and when offered, he immediately borrowed my second copy without hesitation. I'm anxious to hear his comments when he returns from a trip.
