Gr. 3-5. Like other books in the Kids Can series, this combines information presented at middle-grade level with activities that help children absorb it. The familiar horizontal format gives plenty of space for the black-and-white-illustrations, including cartoon-like drawings, photographs, and diagrams. Meteorologist Mark Breen offers insights into the complex subject of weather forecasting, explaining the science that lies behind these useful predictions. Hands-on projects include making a barometer, a rain gauge, and a "tornado" from a spinning column of water in two-liter plastic bottles taped together. Informal, yet always informative, this book is a good place to look for weather-related activities for classroom or home-based science projects. Carolyn Phelan

Bought this for our 8 year old neighbor boys birthday as he is SO into weather, probably has something to do with when he can wear shorts and play soccer! He is an above average reader and this was perfect for him. The book is very interesting and we learned a lot reading through it before gifting it! There are some fun and easy experiments included as well. If you have a future weather forecaster in your life, this is really worth picking up!!

My 8 yr old grandson is so interested in "weather". I have purchase several weather books incl this one from and he loves them.

As a fourth grade teacher, this is a great book that I use in the classroom to teach weather. The writing is easy to understand and the authors have activities children can use to make their own weather tools, observe weather, and record their findings. My principal purchased several copies for me to use in my classroom.

It's still a little above my first grader's level, but he LOVES reading it and has learned a LOT from it, including increasing his reading ability.

Great book - geared well to children and interesting.

This was bought as a gift and the child loved it....

My grandson who is 3 1/2 has a knowledge beyond his years of storms and talks continually about thunderstorms, earthquakes, every aspect of weather and has a lot of the facts down pat. He actually had his mother reading the book as soon as he opened it at Christmas! We suspect he may be a future weatherman! Good book--very happy with my choice

My 6-year-old daughter loves this book. I found it very informative as well. We made the barometer in it which was very cool. This, combined with the National Geographic Kids Everything Weather book, was perfect to satisfy her weather curiosity!
