Heat And Mass Transfer: Fundamentals And Applications (Mechanical Engineering)

Synopsis

With complete coverage of the basic principles of heat transfer and a broad range of applications in a flexible format, *Heat and Mass Transfer: Fundamentals and Applications*, by Yunus Cengel and Afshin Ghajar provides the perfect blend of fundamentals and applications. The text provides a highly intuitive and practical understanding of the material by emphasizing the physics and the underlying physical phenomena involved. This text covers the standard topics of heat transfer with an emphasis on physics and real-world every day applications, while de-emphasizing mathematical aspects. This approach is designed to take advantage of students' intuition, making the learning process easier and more engaging.

Book Information

Series: Mechanical Engineering

Hardcover: 992 pages

Publisher: McGraw-Hill Education; 5 edition (April 4, 2014)

Language: English

ISBN-10: 0073398187

ISBN-13: 978-0073398181

Product Dimensions: 8.2 x 1.5 x 10.3 inches

Shipping Weight: 4.2 pounds (View shipping rates and policies)

Average Customer Review: 3.5 out of 5 stars 22 customer reviews

Best Sellers Rank: #10,168 in Books (See Top 100 in Books) #2 in [Books > Textbooks >](#)

Customer Reviews

Afshin J. Ghajar is Regents Professor and Director of Graduate Studies in the School of Mechanical and Aerospace Engineering at Oklahoma State University, Stillwater, Oklahoma, USA and a Honorary Professor of Xi'an Jiaotong University, Xi'an, China. He received his B.S., M.S., and Ph.D. all in Mechanical Engineering from Oklahoma State University. His expertise is in experimental and computational heat transfer and fluid mechanics. Dr. Ghajar has made significant contributions to the field of thermal sciences through his experimental, empirical, and numerical works in heat transfer and stratification in sensible heat storage systems, heat transfer to non-Newtonian fluids, heat transfer in the transition region, and non-boiling heat transfer in two-phase flow. His current research is in two-phase flow heat transfer, thermal management of mini and micro systems, and

mixed convective heat transfer and pressure drop in the transition region. Dr. Ghajar has been a Summer Research Fellow at Wright Patterson AFB (Dayton, Ohio) and Dow Chemical Company (Freeport, Texas). He and his co-workers have published over 150 reviewed research papers. He has delivered numerous keynote and invited lectures at major technical conferences and institutions. He has received several outstanding teaching, research, advising, and service awards from College of Engineering at Oklahoma State University. Dr. Ghajar is a Fellow of the American Society of Mechanical Engineers (ASME), Heat Transfer Series Editor for CRC Press/Taylor & Francis and Editor-in-Chief of Heat Transfer Engineering, an international journal aimed at practicing engineers and specialists in heat transfer published by Taylor and Francis. Yunus A. Cengel is Professor Emeritus of Mechanical Engineering at the University of Nevada, Reno. He received his B.S. in Mechanical Engineering from Istanbul Technical University and his M.S. and Ph.D. in Mechanical Engineering from North Carolina State University. His areas of interest are renewable energy, energy efficiency, energy policies, heat transfer enhancement, and engineering education. He served as the Director of the Industrial Assessment Center (IAC) at the University of Nevada, Reno, from 1996 to 2000. He has led teams of engineering students to numerous manufacturing facilities in Northern Nevada and California to perform industrial assessments, and has prepared energy conservation, waste minimization, and productivity enhancement reports for them. He has also served as an advisor for various government organizations and corporations. Dr. Cengel is also the author or coauthor of the widely adopted textbooks Fundamentals of Thermal-Fluid Sciences, Heat and Mass Transfer: Fundamentals and Applications, and Introduction to Thermodynamics, all published by McGraw-Hill Education. Some of his textbooks have been translated into Chinese, Japanese, Korean, Thai, Spanish, Portuguese, Turkish, Italian, Greek, and French. Dr. Cengel is the recipient of several outstanding teacher awards, and he has received the ASEE Meriam/Wiley Distinguished Author Award for excellence in authorship in 1992 and again in 2000. Dr. Cengel is a registered Professional Engineer in the State of Nevada, and is a member of the American Society of Mechanical Engineers (ASME) and the American Society for Engineering Education (ASEE).

If you've used any other Cengel's thermo textbook, you'll be entirely familiar with the formatting of this one down to the pictures at the edges of most of the pages to explain some of the more important concepts. Be very competent with differential equations, basic thermodynamics, and fluid mechanics, because winter is coming.

Great book with clearly laid out information. Very few if any errors or contradictions. Slightly vague when explaining when to use combined vs turbulent flow in convection problems but I got through it just fine

New book, the materials are very well organized in this book even though without colorful printing for this item

Good book, the pages are colored, easy to read and laid out nicely. I hate paying \$200 for a textbook, but at least you are getting a quality textbook for the price, it is not always the case.

I need this book for class.

Extensive examples and definitions that do not just leave you hanging out to dry. Problems in the book have solutions that can be found online as a way to check work, which is handy.

This book will help you understand the fundamentals of heat transfer. Did not use it much for mass transfer principles but it gives indepth examples and works through problems so that its easy and makes sense.

Received earlier than expected, which was great. Binding was weaker than noted, hence the non five star rating.
