# Manufacturing Processes: Materials, Productivity, And Lean Strategies

## Synopsis

Manufacturing Processes provides an excellent introduction to today's manufacturing processes, as well as an overview of automated manufacturing systems. The text concentrates on the five major types of industrial materials: metals, plastics, ceramics, woods, and composites. It provides thorough coverage of the forming, separating, fabricating, conditioning, and finishing processes related to each material. The text includes a chapter covering the materials and manufacturing processes used in packaging finished goods.

## Book Information

Hardcover: 528 pages

Publisher: Goodheart-Willcox; 3 edition (October 10, 2011)

Language: English

ISBN-10: 1605255696

ISBN-13: 978-1605255699

Product Dimensions: 1 x 8.8 x 11 inches

Shipping Weight: 2.9 pounds (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars 7 customer reviews

Best Sellers Rank: #41,619 in Books (See Top 100 in Books) #6 in Books > Business & Money > Management & Leadership > Quality Control & Management > Lean #13 in Books > Engineering & Transportation > Engineering > Industrial, Manufacturing & Operational Systems > Manufacturing #14 in Books > Business & Money > Industries > Manufacturing

## Customer Reviews

Dr. J. Barry DuVall is Director of Online Learning in the College of Technology and Computer Science/Department of Technology Systems at East Carolina University. Dr. DuVall has more than 40 years experience teaching and conducting field-based pilot projects in manufacturing processes, industrial materials, productivity improvement, and technology management and communications. Dr. DuVall was previously Director of the Technology Advancement Center, a research and development incubator and test bed that conducted research on technology for learning and the improvement of organizational effectiveness (2004-2009). Dr. DuVall also co-directed, with Dr. David Hillis, the Center for Wireless and Mobile Computing (2002-2004) and OWLS (Online Wireless Learning Systems), a project funded by the U.S. Department of Education, Ericsson, Incorporated, and East Carolina University (1999-2003). Dr. DuVall also directed an ARPA/TRP/NSF Defense Industry Partnership Project called The Factory as a Learning

Laboratory. This project provided education and training to Black and Decker (U.S.) associates and defense industry scientists and engineers in six locations using interactive video and the Internet. (ARPA/TRP/NSF, 1994-1997). This resulted in the first Internet program in industrial technology in the nation. Dr. DuVall received his Bachelor of Science and Master of Science degrees in Industrial Technology and Education from Indiana State University and his PhD in Industrial Education and Technology from the University of Maryland. His industrial experience includes electronics, design, and manufacturing. Dr. David R. Hillis has taught courses in manufacturing and quality in the Department of Industrial Technology at East Carolina University for over 15 years. In 1994 he taught his first course using distance education technology. His experience in distance education ranges from computer-based bulletin boards to closed circuit television and interactive Internet-based methods. In 1997, Dr. Hillis received a grant from East Carolina University to develop a hands-on Internet-accessible laboratory facility. This work created a CNC milling machine with design software that students were able to access, operate, and view entirely over the Internet. Dr. Hillis received his Bachelor of Science in Industrial Engineering and Master of Science in Engineering Administration from Bradley University, Peoria, Illinois. He has an Ed.D. in Training and Development from North Carolina State University. Dr. Hillis had over 20 years of industrial experience in engineering and management with an electrical equipment manufacturer before beginning his teaching career at East Carolina University. His industrial experience has continued to grow through his active consulting practice. Dr. Hillis specializes in manufacturing operations and systems.

Hi I write to tell of this book and how good it is. Please buy it, for those who study manufacturing. It goes straight to the point, and references very well Machining in manufacturing, along with other materials like ceramic processing, in relationship to its production and process procedures. This book is great. I give it thumbs up.

You will learn many interesting facts regarding the things you use every day. If you are a housewife, student, and/or field worker. It will enlighten your understanding to how things work and are used in order to make them work in the world.

perfect timing, easy and as a brand new book

This was the exact book needed for my daughter's class. High quality product

This book is packed with information and is hard to put down. I recommend this book to anyone that is involved in manufacturing.

This book was precisely what my course syllabus told me was required.

Useless textbook!
