Beyond Chinatown: The Metropolitan Water District, Growth, And The Environment In Southern California

Synopsis

As urban growth outstrips water supplies, how can the global challenge of providing "liquid gold" be met? Mixing history and policy analysis, Steven Erie tells the compelling story of the Metropolitan Water District of Southern California (MWD) — one of the world's largest and most important public water agencies — and its role in building the world's 8th largest economy in a semi-desert. No tawdry tale of secret backroom conspiracies — as depicted in the famed film noir *Chinatown* — this fresh telling concerns an unheralded regional institution, its entrepreneurial public leadership, and pioneering policymaking. Using untapped primary sources, the author re-examines this great regional experiment from its obscure 1920s-era origins, through the Colorado River Aqueduct and State Water Projects, to today's daunting mission of drought management, water quality, environmental stewardship, and post-9/11 supply security. A key focus is MWD's navigation of recent epic water battles: San Diego's combative quest for water independence from MWD and L.A.; lingering conflicts over the Colorado River and northern California's fragile Bay-Delta ecosystem; and the myriad challenges posed by water markets, privatization, and water transfers. Facing unprecedented challenges, MWD is devising innovative formulas to sustain this improbable desert civilization. *Beyond Chinatown* concludes by considering MWD's Integrated Resources Plan as a global model for water-resources planning and management, water supply diversification and reliability, affordability, and environmental sustainability. *Chinatown's* seductive mythologies have obscured MWD's authentic, instructive history and lessons. Praise for Steve Erie's previous book, *Globalizing L.A.*: "This book is a must-read for anyone interested in the politics of Western cities, the politics of urban development, and especially the future politics of cities that are likely to be contenders in the increasingly competitive arena of global trade. . . . Erie's analysis will forever direct us to look first at certain public agencies to begin to understand larger patterns of economic growth in any metropolitan area." — *Journal of Urban Affairs* "[A] fascinating history of the Los Angeles region's great assets and the forces that drove their development. . . . One hundred years ago, it was improbable that the Los Angeles region would become the 10th largest economy in the world. In *Globalizing L.A.*, Erie explains how that happened and then, fingers crossed, offers lessons on how California's largest and most diverse city and region can keep playing a leading role." — *Los Angeles Times* "Referencing an impressive body of recent academic research, Erie argues that world-class seaport and airport facilities confer substantial economic advantages and more facilitating links between local businesses and the global economy." — *The Sacramento Bee* "Erie has built a potent political-economy of urban development that recognizes the crucial role of the public sector in mediating globalizing processes . . . and this is a valuable lesson for academics,

dockworkers, community developers, and environmental activists alike." •Economic Geography

Customer Reviews

"This is an extremely important work. . . . 'State of the art' in terms of its research and findings on one of the most important water agencies in the nation." (Abraham Hoffman author of *Vision or Villainy: Origins of the Owens Valley-Los Angeles Water Controversy*) "Erie's persuasive argument that the Metropolitan Water District is one of the creative but flawed designers of Southern California is haunted by forgetfulness: We forget where our water comes from....We forget who manages it for us and why water policy is the most important political decision we never get to make....Unfortunately forgetting is what we're best at. It helps explain why we can't move beyond the myths of Chinatown without stories about Los Angeles as reasoned and convincing as Erie's." (L.A. Times Book Review) "Professor Erie lays out for serious students and readers alike a compelling study of the perception and reality of the MET and the major figures and events that define it. The history of real life intrigue revealed is worthy of the Chinatown title, but there is much more here for today's leaders seeking to find a model of success for regional cooperation and accomplishment." (Ron Gastelum, former CEO Metropolitan Water District of Southern California) "In this pathbreaking history of the MWD, Steve Erie brilliantly debunks L.A.'s greatest urban legend and opens bold new perspectives on the secret history of Southern California." (Mike Davis U.C. Irvine) "Steve Erie knocks another one out of the ballpark. Having written a superb book on machine politics in *Rainbows End*, and having brought the state back into urban politics in compelling fashion

in *Globalizing L.A.*, Erie does path-breaking work once again in his analysis of water politics in *Beyond Chinatown* showing us the importance of regionalization and how to study it. The second of a trilogy on infrastructure in southern California, Erie's new book is another fascinating saga in how the west was developed. " (Clarence Stone George Washington University)"This revisionist history of the Metropolitan Water District transforms its long accepted "black hat" to pale gray. Steve Erie solidifies his reputation as the contemporary authority on Southern California water politics with this highly engaging book. It is a must read for everyone interested in water policy. " (Helen Ingram U.C. Irvine)"In this sweeping history, Erie gives us not only the people, plans, and decisions of a public agency that has allowed a semi-arid region to take water for granted, but also the consequences of those decisions that have assisted in the creation of one of the world's great economies. And then, like a scout at the horizon, he confronts the global challenges facing the future of water for this regionâ •indeed, the future of California. *Beyond Chinatown* indeed. It's a great read and an important book." (James Flanigan business and economics Columnist, LA Times and New York Times)"*Beyond Chinatown* should be required reading for anyone concerned with how successful the agency that provides water to so many clients has been, and whether MWD can sustain that success in meeting the challenges of the future." (Water and Power Associates, Inc Newsletter):"*Beyond Chinatown* is a valuable blend of economic history, policy analysis, and political science about a huge governmental institution charged with bringing water to the part of the country that best typifies the American economy and society in the latter half of the twentieth and early twenty-first centuries -- Los Angeles and Southern California." (EH.Net)"*Beyond Chinatown's* merger of history and policy study, set against debunked myth, should serve as a major reorientation for teaching, researching, and planning, not only in Southern California, but in metropolitan regions throughout the world." (Southern California Quarterly)"This is a first-rate study. It is valuable both for the important story it tells and for the broader lessons it suggests on the role of government in urban development and on the importance of entrepreneurial leadership in meeting complex public needs." (Jameson W. Doig Princeton University)"Water history is tough to write, and no one has done it better than Steven P. Erie in this fast-paced narrative based on monumental research. I marvel at the multi-faceted inclusiveness of this story of water, region, politics, engineering, growth, and the environment." (Kevin Starr University of Southern California)

As urban growth outstrips water supplies, how can the global challenge of providing â œliquid goldâ • be met? Mixing history and policy analysis, Steven Erie tells the compelling story of the Metropolitan Water District of Southern California (MWD)â •one of the worldâ™s largest and most

important public water agencies” and its role in building the world’s 8th largest economy in a semi-desert. No tawdry tale of secret backroom conspiracies” as depicted in the famed film noir Chinatown” this fresh telling concerns an unheralded regional institution, its entrepreneurial public leadership, and pioneering policymaking. Using untapped primary sources, the author re-examines this great regional experiment from its obscure 1920s-era origins, through the Colorado River Aqueduct and State Water Projects, to today’s daunting mission of drought management, water quality, environmental stewardship, and post-9/11 supply security. Great book!

great book. great service. as described and shipped fast!!

It's about time that someone got beyond the misleading notion that water is simply a morality play. The damage done to developing any rational water policy in California by Chinatown, the movie, and Reisner's Cadillac Desert has been enormous. Eire puts the quest for water for Southern California in a historical and policy-making perspective that goes beyond the literary license taken with the facts that have muddied the politics of water in our state. Unfortunately, Eire isn't interested in a good story as Robert Towne and Reisner were and his book won't get the wide reading it deserves.

Erie's book is an entertaining read about the history of the Metropolitan Water District and its role in serving a thirsty Southern California. In California, water and politics have always been inseparable. While Professor Erie's book may rankle some individuals, I found it to be a thoroughly researched and objective book. Certainly not dry reading, I would recommend it to anyone with an interest in California water, history, or politics.

Erie is a brilliant, thorough researcher with a track record that supports the believability of his facts and conclusions. He is too gentle on the San Diego schemers he uncovers in "Beyond Chinatown," but he is a scholar first, and an exciting historian.

This is a superb book on the politics of water allocation in the arid southwest. Typical of Professor Erie, the intricacies of allocating this critical resource are analyzed and described in an exceptionally interesting and readable style. A wonderful book.

The story in this book is interesting, though in all fairness Dr. Erie should have likely disclosed that he has been a paid litigation expert for Metropolitan Water District, one of the main subjects of the book. Readers might have wanted to know the author was paid by his subject.
