Netter's Anatomy Flash Cards: With Online Student Consult Access, 4e (Netter Basic Science)

Synopsis

Netter's Anatomy Flash Cards are the most convenient and portable way to review anatomy on the fly. This 4th Edition contains full-color illustrations from Netter's Atlas of Human Anatomy, 6th Edition paired with concise text identifying those structures and reviewing relevant anatomical information and clinical correlations. Online access at studentconsult lets you review anatomy from any computer, plus additional "bonus" cards and over 300 multiple-choice questions. A perfect study aid and complement to Netter's Clinical Anatomy, 3rd Edition's concise text and the Netter/Atlas of Human Anatomy, 6th Edition. Netter. It's how you know. Test and teach yourself at your own pace. Visually learn and identify anatomic structures using beautifully drawn artwork by and in the style of Frank Netter. Get clinically relevant knowledge with accompanying text and tables. Pre-punched holes make it easy to carry selected groups of cards with you. Focus on the most relevant clinical implications of anatomic concepts, helpful in preparing for exams and the USMLE Step 1.

Book Information

Series: Netter Basic Science

Cards: 674 pages

Publisher: Saunders; 4 edition (April 4, 2014)

Language: English

ISBN-10: 0323185959

ISBN-13: 978-0323185950

Product Dimensions: 3.8 x 4.5 x 7 inches

The cards are great. Very good detail on the muscular depictions. Cranial cards have more information than you would think. BUT-these cards are not for the faint of heart or for "unserious" students. They can be somewhat daunting. After initially looking them over I groaned and almost put them up on a shelf. Planning on maybe getting to them when I could (which would mean never). But once I got started, they really are helpful. Very helpful if you're taking Human A&P 1 & 2. Main con: The only downside I've found is that the cards are arranged by body region rather than system. Perhaps that's for some medical/nursing/diagnostic/etc. courses? I don't know why. But-it's kind of a pain for the Human AP classes I'm in. Fyi if you're taking a detailed med class like gross anatomy, I'd tend to agree with other reviewers that there is not enough info on the cards. You'd probably still find them helpful but you'd also need something else. Edition update: Jsuk, I'm like some of the other older students in that I almost always buy older editions of reference materials & class books to save \$\$\$. Sooo, before ordering I looked at a friend's 3rd edition to see if I preferred those. The 3rd edition is essentially the same as the 4th. Oddly, the 3rd has the name of the tissue (ie: muscle, bone, etc) is on the front of the flash card as well as the back. I have no idea why Netter's did that. My friend said it wasn't a big deal but it was kind of a pain to continually have to cover the top part of the front when testing herself. I was told that this was not the case w/ the 4th edition. That they deleted the info on the top/front of the card & only had a picture of the tissue. That is not the case. Netter's has changed (somewhat) what's on the front of the card but they still give you an awfully big heads up (ie: "Muscles of Thigh: Anterior View). This is probably not a big deal to most folks but I would have preferred less info on the front, more on the back... But, when I dropped the price on this edition to under \$30, that wasn't much more than the 3rd editions on Ebay so I just went ahead and ordered the 4th edition. I'm sure there are some other changes but nothing major stands out so far. The box, and some of the cards, are more colorful. Woohoo! To be completely frank, I think that

you'll be happy with either edition you pickup. Probably even the 2nd edition set is very good but I haven't seen those cards. If you're willing to take a chance, the 2nd edition is incredible inexpensive on some sites. Oh, fyi for all the OCD/Anal people out there. The cards may arrive a tad bit damaged. They shift in their box so during shipment they must bang back and forth a little. The only thing "damaged" were the dividing card tabs. But they only got slightly bent, etc. Nothing important to me but my girlfriend seemed surprised and frankly a little fixated on the fact that they were clearly brand new, in shrink wrap but still less than 100%. So if it caught her attention & you are the kind of person this would bother, maybe pick them up at BAM. My final recommendation? If you have to take college or post grad level Human Anatomy & Physiology 1 & 2 or perhaps something less intensive but still hard (ie: Massage Therapy national boards) AND you're willing to study, BUY THESE! Whichever edition you want is fine but just go ahead and pick these up. I guarantee they will help & that they're worth the \$\$.

Take care and good luck with your classes/program!!

Currently taking A&P at University and decided to get something physical to practice with (all our resources are online). First: Cards are beautifully illustrated, a lot of images for anatomy are either too real and hard to study, or too cartoonish with the same result. These cards are moderately cartoonish, while still being clear enough to immediately recognize the same muscles when we did the cadaver lab. Some of the multiple labeled ones have the right angle and design to hold more, but they don't, because it doesn't match with a certain criteria. For example, I added Buccinator, Platysma and orbicularis oris to the 'facial expressions' card. They may not be facial expression muscles, and you can find these on other cards, but I was trying to keep my pack count down. It is a little overwhelming at first, so I REALLY recommend sitting down with JUST your word list for this week, look through the index, and pull out only those cards. If you try to pull out all bones, or all muscles, you'll get overwhelmed. Amazing set though, I'm SO GLAD I got them. I just wish they were laminated, it gets a little awkward taking them in the cadaver lab. O_o

The old edition for some dumb reason had the name of the muscle on the front and the back. This edition, the muscle names are only on the back. MSK and muscle memorization was not super easy for me and these flash cards were extremely helpful. I am a medical student in Chicago. Did not feel like anything was missing.

Let me explain why I gave this product 1 star. When I first started using these cards they were great. I believe I was studying the thorax, abdomen and pelvis. I would go to those sections, look at

the number assigned to a figure and I would learn the anatomy. However, Now that I am on the limbs, it is becoming increasingly obvious that the people who made these flashcards do not know what flashcards are. Now, each of the flash cards displays a title on the picture side of the card. Which is okay, as long as the title is not answer. This was the case for thorax, abdomen and pelvis. For example; the card title says "Pelvic Girdle: superior view" and then there are a few figures numbered and on the back side the numbers have the answers. However, of the 65 cards of the "upper limb" section which I just brought to the coffee shop, ONLY 10 ARE USABLE AS FLASHCARDS BECAUSE THE ANSWER IS NOT THE TITLE. LITERALLY 55 OF THESE CARDS have only a SINGLE number and the TITLE OF THE FLASH CARD is the answer to that number which is on the PICTURE SIDE OF THE FLASHCARD. How are you supposed to study flash cards that have the ANSWER ON THE SAME SIDE AS THE QUESTION. This is infuriating and a massive waste of my time. And because the cards have a gloss finish, I can't just use a sharpie to deface the ANSWER THAT IS ON THE SAME SIDE AS THE QUESTION. What were these people thinking? If I wanted labeled pictures of anatomy, I would have gotten the textbook. See the pictures I have added for examples of poorly thought out design

Got the kindle edition. Hoping to make flash cards using the ap. But instead it ended up not being what I thought. I wanted to mark the cards I wanted to study and create a deck for later use. But it works in a way where u mark the card then I type what u want on the other side. I got his product to save me time. Which it didnt

The content on these flash cards are really in depth and a great study tool, that being said, that being said, many of the organs are overlooked, specifically the brain. Considering that 1/3 of my first lab practical will be on the brain, I am very disappointed that these note cards have basically nothing about that section of the body. There is very little discussed in major organs. The weird organization, I can live with because the cards have numbers and a ring so that you can take out what you need and then be able to put them away.
