Grade Level: Kindergarten - 3

Customer Reviews

There is enough data to provide material for elementary research reports and it is accompanied by an index and a table of contents that introduces each set of "disaster-ous" questions. All and all, a strong contender for family reading and for the library or classroom shelf. • Children's Literature

Rosie Greenwood is an innovative author and editor with more than twenty years' work in illustrated

children's books. She has written about topics as diverse as oceans, horses, pyramids, and stars.

I love this book! It has simple yet technically accurate descriptions of why events occur in nature. The book explains such events as thunder, lightning, fire balls, etc in addition to volcanoes. The pictures and graphics are colorful and help explain the science. The book uses everyday words to present the scientific explanations so that younger children can easily grasp the concepts. For example, the thunder sound is created during the explosion of air due to the extreme heat of the lightning bolt. My 7 and 6 year old sons enjoyed reading this book.

This book is about natural disasters - probably most suited for kids 8 - 12 - very educational but for younger children might be a bit scary

My 5 year old loves the I wonder books. They give a lot of information in an easy to read format. My husband and I have even learned things from them. Great for a kid with lots of questions who loves information.

Great book. My son likes all series "I wonder why".

Bought this as a gift for my nephew. He sat right down and started reading it. According to his mom. He has read it a couple of times. He is a first grader who enjoys books

I Wonder Why Volcanoes Blow Their Tops: and Other Questions About Natural Disasters Good pictures, short bits of information just right for a 4 year old or even older. My boy is fascinated with natural disasters so this is right up his alley. We already had several books on the subject, but this was a nice addition. Not too wordy or scientific, but also does not talk down to a bright child.

This book features all kinds of natural disasters. It has short sections and quick facts with good graphics.

Great book for probably 6+. My 4 year old granddaughter enjoyed looking at the pictures. Glad I got it and would buy it again. Very informative.
