# Extinction And Phylogeny

## Synopsis

More than 99% of all life that has ever existed on this planet is extinct. Moreover, human acceleration of the extinction of species has created a crisis in biodiversity. How can the history of past life be retrieved? How does this history bear on our understanding of the organization and evolution of present-day species? These questions are addressed in extinction and phylogeny.

## Customer Reviews

Stands apart from the many other recent volumes on extinction with its emphasis on the importance of systematic data in the analysis of the stratigraphic record and the distribution of species in space and time. These chapters carry ideas that will have lasting consequences for paleontological theory and method.
