Veterinary Vaccines (Progress In Vaccinology)

Synopsis

Vaccines have historically been considered to be the most cost-effective method for preventing communicable diseases. It was a vaccine that enabled global eradication of the dreaded disease smallpox. Mass immunization of children forms the anchor of the strategy of the World Health Organization (WHO) to attain "health for all" status by the year 2000. Vaccinology is undergoing a dimensional change with the advances that have taken place in immunology and genetic engineering. Vaccines that confer short or inadequate immunity or that have side effects are being replaced by better vaccines. New vaccines are being developed for a variety of maladies. Monoclonal antibodies and T cell clones have been employed to delineate the immunodeterminants on microbes, an approach elegantly complemented by computer graphics and molecular imaging techniques. Possibilities have opened for obtaining hitherto scarce antigens of parasites by the DNA recombinant route. Better appreciation of the idiotypic network has aroused research on antiA Aidiotypic vaccines. Solid-phase synthesis of peptides is leading to an array of synthetic vaccines, an approach that is expected to attain its full potential once the sequences activating suppressor cells are discovered and the rules for presentation of antigens to T and B cells are better worked out. A new breed of vaccines is on the horizon that seeks to control fertility. Originally conceived to intercept a step in the reproductive process, they are conceptual models for developing approaches to regulate the body's internal processes.

Book Information

Series: Progress in Vaccinology (Book 4) Paperback: 342 pages Publisher: Springer; Softcover reprint of the original 1st ed. 1993 edition (October 24, 2011) Language: English ISBN-10: 1461392284 ISBN-13: 978-1461392286 Product Dimensions: 6.1 x 0.8 x 9.2 inches Shipping Weight: 1.2 pounds (View shipping rates and policies) Average Customer Review: Be the first to review this item Best Sellers Rank: #7,390,956 in Books (See Top 100 in Books) #54 inà Â Books > Medical Books > Veterinary Medicine > Immunology #2008 inà Â Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Immunology #3153 inà Â Books > Medical Books > Basic Sciences > Immunology
